

This review answers three practical questions about the Geneva residential market: what prices look like today, how we got here, and where the value differs by commune. All figures are derived from official notarial transaction records published by the Canton of Geneva (OCSTAT). These are completed sales registered with a notary — not listing prices, bank appraisals, or survey estimates. The dataset covers condominium apartments (PPE) and detached houses across all 45 communes.

Annual data through 2024 · Quarterly data through Q2 2026

New vs existing: average transaction value across four segments

Canton of Geneva · Average ticket (value / n), not median · Quarterly — the only frequency with new vs existing

Source: OCSTAT T 05.05.1.1.01 · YoY % vs same quarter prior year · House average skewed by premium communes

Key observations

- ▶ A house costs on average 2× more than an apartment (3.6M vs 1.8M CHF).
- ▶ New apartment average rose +56% YoY — driven by several large projects closing, not a broad market-wide price increase.
- ▶ Existing house average (3.6M) is pushed up by luxury transactions in premium communes (Cologny, Vandoeuvres).
- ▶ New and existing apartment prices are similar (~1.8–2.0M per transaction).

House prices show 2× wider dispersion than apartments

Canton of Geneva · CHF per transaction (not per m²) · Existing stock only

Source: OCSTAT T 05.05.1.1.02 · P25–P75 range, existing stock · YoY % vs Q2 2025

Key observations

- ▶ Half of house buyers pay between 1.6M and 3.2M CHF — prices vary significantly by commune and property type.
- ▶ Apartments are more predictable: 75% of transactions fall within 1.0–1.9M.
- ▶ Apartment P75 (~1.9M) meets house P25 (~1.6M) — at this price, a buyer chooses between a large apartment or a modest house.
- ▶ House median stable at 2.10M (-2.1% YoY), apartment median 1.40M (+3.5% YoY).

Existing apartments cost more per m² than new ones

Canton of Geneva · CHF/m² · Free market (PPE) · Annual 2024

Source: OCSTAT T 05.05.1.4.03 · P25–P75 range, free market · YoY % vs 2023

Key observations

- ▶ Existing apartments (10,853 CHF/m²) are 5.5% more expensive than new (10,284) at canton level — counterintuitive.
- ▶ Secondary market is 2.1× larger: 828 existing vs 395 new transactions.
- ▶ Both grew ~2.4% YoY — market moves uniformly, not by segment.
- ▶ Existing P25–P75 range (8.9–12.9K) is 1.7× wider than new (9.3–11.6K) — more diverse locations.

Within each commune, new apartments cost 17–29% more

Canton of Geneva · CHF/m² · Free market · 2024 · Only communes with both segments

Source: OCSTAT T 05.05.1.4.03 · Median CHF/m² · Canton-level “existing > new” reversal = Simpson’s paradox (composition effect)

Key observations

- ▶ Within each commune, new costs 17–29% MORE than existing — the opposite of the canton-level picture.
- ▶ This is a composition effect: new builds concentrate in affordable communes (Thônex, Meyrin, Bernex), while existing stock trades everywhere including premium locations.
- ▶ Bernex has the highest new-build premium (+29%), likely single large project at n=15.
- ▶ Practical: “new is cheaper” is a geographic illusion — same neighborhood, same m², new always costs more.

Existing apartment prices vary 1.8× across communes

2024

YoY vs 2023

Canton of Geneva · Existing apartments (PPE) · CHF/m² · Free market · 2024

Source: OCSTAT T 05.05.1.4.03 · P25–P75 range · YoY % vs 2023 · Unpublished communes (n<10) omitted

Key observations

- ▶ 1.8× price gap: Vernier (7,182 CHF/m²) vs Genève (12,597). Same canton, 75% more living space for same budget.
- ▶ Only 4 communes above canton median (10,853): Genève, Carouge, Cologny, Chêne-Bougeries.
- ▶ Carouge: strongest growth (+15.9% YoY) among premium communes.
- ▶ Veyrier (-13.2%) and Plan-les-Ouates (-5.8%) declined — but at n=18 and n=12, this may be statistical noise.

New apartments: only 5 communes have enough data

Canton of Geneva · New apartments (PPE) · CHF/m² · Free market · 2024

Source: OCSTAT T 05.05.1.4.03 · P25–P75 range · YoY % vs 2023 where available · Unpublished = n<10

Key observations

- ▶ Only 5 of 45 communes have enough new-apartment data (n≥10) in 2024 — market is extremely concentrated.
- ▶ Two tiers: affordable (Meyrin, Thônex, Bernex at 10–11K) vs premium (Genève, Cologny at 15–16K).
- ▶ Genève new +23.1% YoY — not market growth but a few luxury project closings (n=27).
- ▶ Communes appear and disappear from the statistics each year — new-build market is structurally volatile.

Existing apartments: median CHF/m² doubled since 2006

Source: OCSTAT T 05.05.1.4.03 · Existing PPE, free market, canton · Band = P25-P75

Apartments (CHF/m²)

- ▶ Median roughly doubled since 2006: from ~5,300 to ~10,900 CHF/m².
- ▶ Fast growth 2006–2012 (+80%), then a 8-year plateau (2012–2020), followed by renewed acceleration.
- ▶ P25–P75 band has remained relatively stable in width — the entire distribution shifted upward, not just the top.
- ▶ Even during the 2012–2020 plateau, prices never fell below 2012 levels — no sustained downward correction.

Detached houses (all): median per dwelling tripled since 1990

Source: OCSTAT T 05.05.1.3.03 · All detached houses, canton · Band = P25-P75 · Not CHF/m²

Houses (CHF per dwelling)

- ▶ Median house tripled since the mid-1990s: from ~0.75M to ~2.2M CHF.
- ▶ 1990–2004: decade of stagnation (flat at ~0.8–1.0M). 2004–2012: sharp rally to ~1.8M.
- ▶ Post-2020: P25–P75 band has widened dramatically — growing divergence between affordable and premium houses.
- ▶ Note: OCSTAT publishes house prices per dwelling (not per m²) — not directly comparable to apartment data.

Quarterly prices: stable corridor, no sustained decline

Source: OCSTAT T 05.05.1.1.02 · Existing dwellings, canton · Band = P25–P75 · Q1 2007 – Q2 2026

Key observations

- ▶ Apartment median keeps climbing (+13% over 6 quarters to 1.40M); house median is plateauing at ~2.1M — two markets are diverging.
- ▶ Three macro shocks (2008, COVID, 2022 rate hikes) produced no sustained median decline — 1–2 quarters of correction at most.
- ▶ House P75 surged +64% in 2021–2023 (2.5M → 4.1M), then retreated — premium segment reacts, median absorbs.
- ▶ Apartment P75 grew modestly (+18%) — houses have a higher and more volatile ceiling.

P25 barely moves: apartments ~0.9–1.0M, houses ~1.5–1.7M — a structural price floor.

- ▶ House corridor (P75–P25) widened 33% since 2019; apartment corridor is stable — house market is polarizing.

Note: –36% drawdown is a composition shift (which apartments sold), not a real price drop. Annual CHF/m² shows max –12% over 4 years.

Current level vs 10-year CAGR — two different questions

Source: OCSTAT T 05.05.1.4.03 · Existing PPE, free market · CAGR = annualised growth · Author's calculations

Key observations

- ▶ Expensive ≠ fast-growing. Coligny: 12.3K/m² but only 1.1% CAGR. Carouge: similar price, 3.5% CAGR.
- ▶ Vernier: cheapest (7.2K/m²) yet 2.4% CAGR over 10 years — catch-up growth from a low base.
- ▶ Genève city: highest absolute price (12.6K) but lowest CAGR (1.2%) — already mature, limited upside.
- ▶ Practical: for long-term value, look at Lancy, Vernier — not the most expensive communes.

Apartment prices per m² by commune

2024

· Existing PPE · Free market · 2024

YoY vs 2023

Source: OCSTAT T 05.05.1.4.03 · Notarial transactions · Grey = n<10 (unpublished) · City of Geneva = four sectors combined

- ▶ The price gradient runs east-west: premium communes (Genève, Cologny, Chêne-Bougeries) cluster along the lake shore at 12–12.5K CHF/m².
- ▶ Western suburbs (Vernier, Bernex, Meyrin) offer 30–40% lower prices per m² — same canton, very different value proposition.
- ▶ Carouge stands out: +16% YoY with 12.4K/m² — catching up to the premium lakeside communes.
- ▶ Veyrier (–13%) and Vernier (–11%) declined YoY, but small sample sizes (n=18 and n=73) may explain the drop.
- ▶ Grey communes have fewer than 10 transactions — OCSTAT does not publish a median for them.
- ▶ 1.8× price range across the canton: same 60m² apartment costs 430K in Vernier vs 750K in Cologny.

House prices by commune

2024

OCSTAT · Detached houses · 2024

Canton of Geneva · Detached houses · Median CHF per dwelling · 2024

YoY vs 2023

Source: OCSTAT T 05.05.1.3.03 · Notarial transactions · Grey = n<10 (unpublished) · Not CHF/m²

- ▶ Cologny dominates at 6.2M CHF/house — 3.7× more than Vernier (1.7M). A single canton, two different markets.
- ▶ The premium belt along the lake (Cologny, Ch.-Bougeries, Vandoeuvres, Collonge-Bellerive) = 3.5–6.2M.
- ▶ Genève city: -41% YoY (1.9M) — misleading, as only n=18 transactions in the city proper. House market is suburban.
- ▶ Bernex: +23% YoY at 2.0M — the strongest grower among affordable suburbs.
- ▶ More communes publish house data (15) than apartment CHF/m² (13) — houses trade in more communes.
- ▶ Note: prices are per dwelling, not per m². Larger houses cost more regardless of the location premium
